Invitation

Dear Partners,

In my capacity with the Forum for Sustainability through Life Cycle Innovation (FSLCI), and building on the strong foundation laid by earlier LCA conferences in India, I am pleased to reach out about an initiative that seeks to revive and carry forward that very important tradition. After a hiatus of several years, we believe the time is right — and the community is ready — to bring a dedicated Indian LCA conference back to life.

The FSLCI is a global community dedicated to advancing LCA capacity around the world and seeks to foster knowledge exchange, cross-sectoral dialogue, and innovation in this space. A recent milestone to build capacity in India was the seminar "Scaling Sustainability through Life Cycle Thinking," held on October 11, 2025 at Science Gallery, Bengaluru. The event served as an important moment of reconnection for the Indian community, and the message from participants was unambiguous: there is a strong collective desire for a dedicated Indian platform to sustain and deepen this work.

In response, we are proud to announce Life Cycle Insights for Sustainability (LCIS) — India's own forum for the Life Cycle community to convene, collaborate, and advance shared goals. LCIS 2026, our inaugural conference, will be held on September 11-12, 2026, hosted by Goa Institute of Management, Sanquelim, Goa.

LCIS 2026 is a first-of-its-kind opportunity to demonstrate genuine commitment to sustainable development using scientific impact assessment and improvement methodologies. It offers a solid value proposition to sponsors along with the opportunity to connect with key voices across academia, industry, and policy at a pivotal moment in India's sustainability journey. Sponsorship amounts have been carefully structured to suit all budgets and ensure inclusivity.

We warmly invite you to take your rightful place among the recognised leaders and innovators in this space.

Sanjeevan Bajaj

Vice Chair, FSLCI Executive Committee
& Director, CRPG

Past LCA Activities in India

LCA is gaining significant traction in India, driven by growing regulatory pressure, corporate sustainability commitments, and increasing integration of environmental criteria into procurement and investment decisions. India's engagement with LCA is not new — the Indian Life Cycle Management (ILCM) conference series, organised by FICCI between 2012 and 2019, demonstrated the depth of interest and expertise within the Indian community, bringing together academia, industry, and policy stakeholders around shared sustainability goals.

In parallel, collaborative efforts by UNEP, NEERI, and CII culminated in the 2019 release of a roadmap for an Indian LCA database — a landmark step towards building the national data infrastructure that credible, India-specific life cycle work requires. Since then, the urgency has only grown: as global supply chains demand greater transparency and Environmental Product Declarations become increasingly standard in international trade, Indian industry faces both the challenge and the opportunity of embedding LCA into its sustainability practice. LCIS 2026 arrives at precisely this moment.

FSLCI's First Seminar in India

In October 2025, FSLCI took its first significant step in India by co-hosting the seminar "Scaling Sustainability through Life Cycle Thinking" at Science Gallery, Bengaluru, together with the Council for Research on Policy and Governance (CRPG). The event brought together some 35 practitioners, researchers, and industry representatives for a programme spanning LCA applications in industry, MSMEs, and textiles, as well as a compelling session contextualising life cycle thinking around sustainability challenges specific to Bengaluru.

The seminar closed with an open, participant-led barcamp session — a format that surfaces genuine community priorities rather than predetermined agendas. The insights from that session were telling: Participants demonstrated not only a strong appetite for deeper engagement with LCA methodologies, but a clear and collective desire for a dedicated Indian platform to anchor this work going forward. LCIS 2026 is our direct response to that call — a conference designed by and for the Indian Life Cycle community, building on the momentum of Bengaluru and offering the scale, structure, and reach that the community has asked for.

About LCIS 2026

LCIS 2026 builds on the tradition of previous LCA events in India but incorporates new and innovative ideas to offer the best possible conference experience to the Indian sustainability community. The conference will be organised as a truly hybrid conference, which will enable participants in Goa, but also virtual participants, to follow a diverse program and contribute to it through live-streamed interventions.

In the same vein as our first Indian seminar at Bengaluru in October 2025, we again seek to create a unique space to think in creative and new ways about sustainability efforts being fostered around the world and link these to local priorities and innovative ways to address them.

As with our signature LCIC conferences held bi-annually in Berlin, LCIS 2026 will offer a great opportunity to showcase life cycle innovation that will help us transition towards a more sustainable world. Much like with our other conferences, LCIS will offer participants a unique conference atmosphere that fosters exchange, networking, and collaboration!

We cannot wait to welcome a broad audience of diverse stakeholders interested in driving sustainability in India to our first ever Life Cycle Insights for Sustainability Conference in Goa in September!

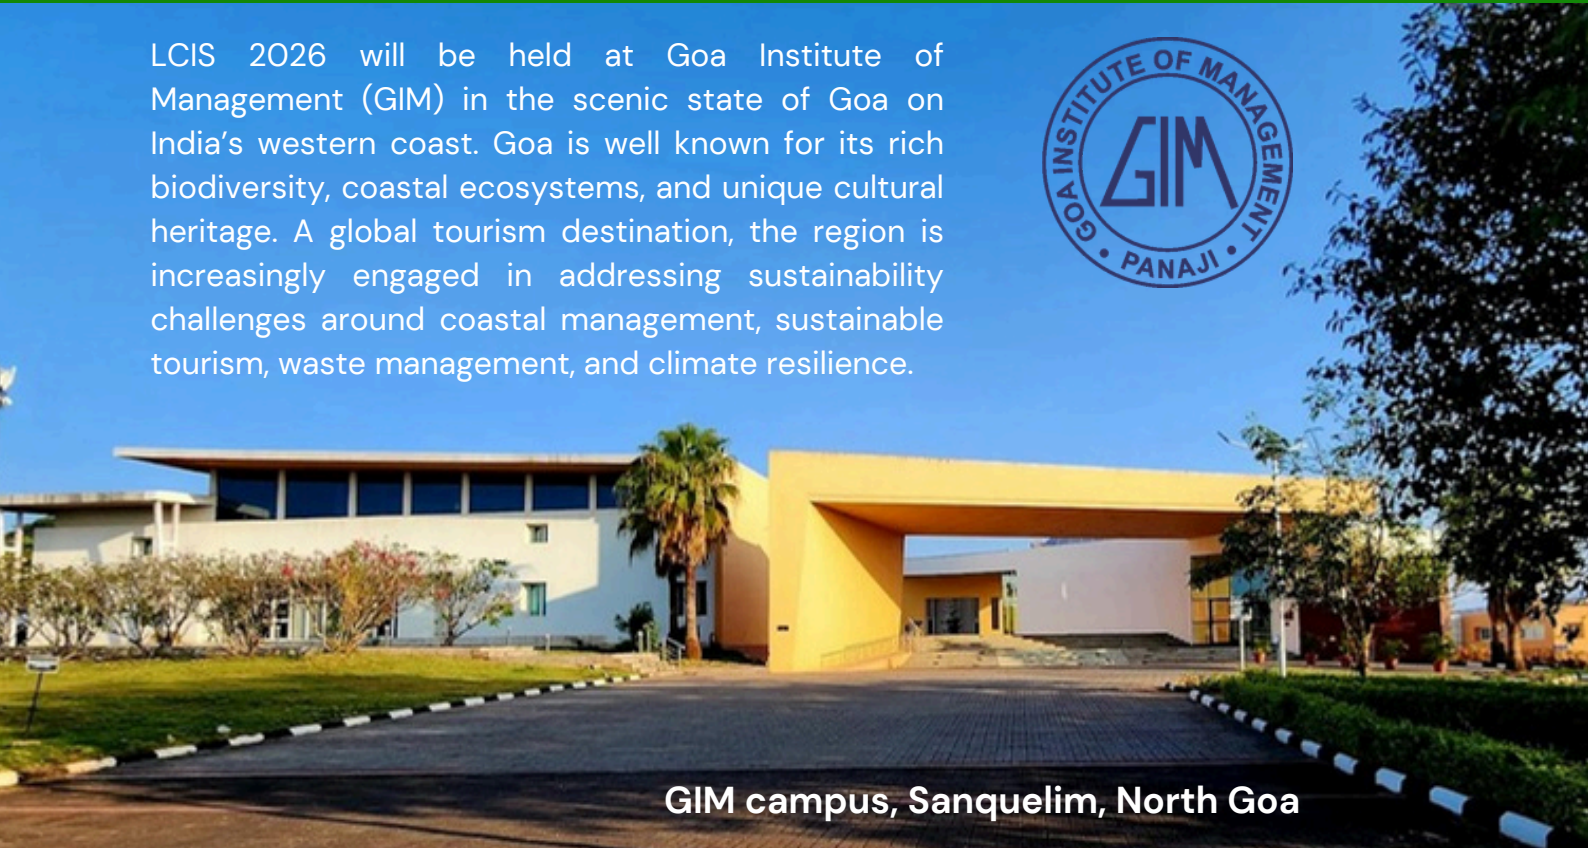

More information about LCIS is available here:

<https://fslci.org/events/lcis2026>

LCIS 2026 Host

LCIS 2026 will be held at Goa Institute of Management (GIM) in the scenic state of Goa on India's western coast. Goa is well known for its rich biodiversity, coastal ecosystems, and unique cultural heritage. A global tourism destination, the region is increasingly engaged in addressing sustainability challenges around coastal management, sustainable tourism, waste management, and climate resilience.

GIM campus, Sanquelim, North Goa

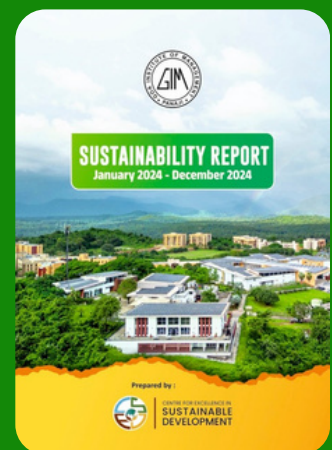

GIM offers not only a perfect venue for LCIS 2026, but also represents a leader in driving sustainability in India with a modern, environmentally conscious setting for academic exchange and collaboration. Through its Centre for Excellence in Sustainable Development (CESD), GIM is actively integrating sustainability into research, education, and practice. In order to integrate sustainability into practice, CESD has developed a sustainable events framework and an event carbon footprint calculator that measures greenhouse gas (GHG) emissions associated with campus events and institutional activities.

Support LCIS 2026 as a Sponsor

Life Cycle Assessment is no longer a niche methodology — it is fast becoming a mainstream instrument shaping how organisations measure, own, and communicate their environmental impact. As regulatory expectations rise, supply chains demand greater transparency, and sustainability credentials increasingly influence procurement and investment decisions, the ability to engage credibly with LCA is becoming a marker of genuine leadership.

Sponsoring LCIS 2026 places your organisation at the centre of this shift. Our LCIS brings together a uniquely powerful mix of stakeholders — researchers, industry leaders, policymakers, and sustainability practitioners — in a space where dialogue turns into collaboration, and collaboration into measurable impact. In the context of India, this carries particular significance: as one of the world's most dynamic and fast-growing economies, the choices Indian industry makes today about how it measures and manages its environmental footprint will have consequences far beyond its borders.

To sponsor LCIS 2026 is to signal — to clients, partners, and the wider global market — that your organisation is not observing this transition from the sidelines, but actively shaping it. It is an opportunity to contribute to the India growth story while helping ensure that growth is underpinned by the scientific rigour and systemic thinking that lasting sustainability requires. In a landscape where impact is increasingly expected to be demonstrated rather than merely declared, few investments speak as clearly as this one.

LCIS 2026 sponsorship benefits

- **Lead the conversation** — be recognised as a champion of evidence-based sustainability practice in India
- **Bridge global and local** — connect international expertise with India-specific sustainability priorities
- **Build strategic networks** — engage with practitioners, researchers, policymakers, and industry leaders in one space
- **Signal genuine commitment** — demonstrate to clients and partners that your organisation is actively shaping sustainable growth
- **Shape the future** — support the next generation of LCA practitioners and help define the field in India

Sponsorship Options

Main conference				
Level	Platinum	Gold	Silver	Bronze
Price in ₹ *	300,000	200,000	100,000	50,000

LCIS 2026 Organizers

FSLCI, Berlin

Established in 2015, **Forum for Sustainability through Life Cycle Innovation e.V. (FSLCI)** (<https://fslci.org>), is a non-profit incorporated in Germany with members being organizations and professionals from industry, academics, science, policy with an interest in applying Life Cycle approaches to enhance the sustainability of economic activities. It provides a global platform to its members through workshops, summer schools, webinars and other events. FSLCI has extensive experience in creating thought-scapes and interactive spaces where sustainability professionals come together to share knowledge, build networks, and advance application of LCA approaches. Well-versed in organizing classic insight sessions, workshops and innovative formats like our barcamp-style discussions, FSLCI also has a strong base in India with a significant proportion of our office bearers being Indians.

GIM Sanquelim, Goa

Established in 1993, **Goa Institute of Management (GIM)** (<https://gim.ac.in/>) is a leading not-for-profit business school in India committed to responsible and sustainability-driven management education. With strong academic rigour, global accreditations, and a vibrant community of faculty, students, and over 6,000 alumni across 15+ countries, GIM integrates sustainability across teaching, research, and practice. The Centre for Excellence in Sustainable Development (CESD) (<https://gim.ac.in/institute/centresofexcellence>) at GIM serves as a dedicated platform for advancing sustainability through research, capacity building, and policy engagement. Working across areas such as climate action, water, circular economy, and sustainable cities, CESD collaborates with academic, industry, and government partners. With experience in international initiatives such as Erasmus+ Co-LIFE, CESD fosters interdisciplinary learning, stakeholder engagement, and practice-oriented solutions, translating sustainability into measurable and impactful outcomes.

CRPG, New Delhi

Established in 2019, **Council for Research on Policy and Governance (CRPG)** (<https://crpgglobal.org>) is a non-profit think tank incorporated in New Delhi working in the areas of Governance, Development, Inclusion, and Sustainability through a range of interventions including. capacity building, research, advocacy, consultancy, strategy formulation, project design and implementation. Currently CRPG is developing an LCA hub for enhancing basic LCA literacy and enabling experiential learning through hands-on exercises and games.
